

## **ABSTRACT OF THE DISCLOSURE**

Interactive display devices, display systems, and methods for operating the same are provided. The interactive display device has a display, a non-volatile memory having interaction data and image content depicting a character stored therein and a communication circuit adapted to transmit interaction data to another interactive display device and to receive interaction data from said other interactive display device. A display controller is adapted to determine modified interaction data based at least in part upon interaction data, to determine a character image based at least in part upon the modified interaction data and the stored image content and to cause of the display to present the character image. The display controller is further adapted to store modified interaction data in the non-volatile memory.
